

## **Williton Pavilion Project**

### **Project Update.**

Work continues to schedule and ground floor block work is well underway, each of the rooms has now been formed and the gable ends completed. During the month, Robert Street was closed to traffic so that they could complete the connection to the main sewer.

I have been asked about the windows that have appeared in the rear wall of the building which are visible from the Doctors car park, as none are on the drawings. These are in fact openings for air ducts, the building will have an air circulation system that will blow either cold or warm air into the main hall, this will be used to supplement the under floor heating and provide ventilation when we hold indoor events.

We are now reaching a stage in the project where we are having to consider things such as floor coverings and wall and door colours. One of our principle objectives is to ensure we address the requirements of those with specific needs, ensuring where possible we have a user friendly facility. To achieve this, we will be adopting bold contrasting colours, large clear signage including brail and for the younger generation, there will be dual height hand rails up the stairs, along with other features to meet with their needs.

We mentioned at the parish assembly certain design changes that were being considered. These have now been agreed, one is to develop the rear of the building and provide a service area, this area is secured and will allow us to house the waste bins, the change will remove the need for a separate bin store that was to be built on the corner of the access road, another change is to incorporate a small kitchenette in the main meeting room for making hot drinks and provide for a level of catering.
